

# Predicting Storms 101

*Predict a storm long before it is even visible to radar or satellite*

## Get a Barograph and Get Started

1. Download MARINE BAROGRAPH app. (iPhone, iPad, iPod touch or Android). App can be used on land or at sea.
2. In the app, enter your Elevation (height above sea level) in metres or feet. Plenty of free apps give your elevation e.g. *Current Altitude*.
3. Go to 'Graph' in the menu at the bottom then tap on 3h which is just above the graph itself. You usually need the pressure change over 3 hours.
4. Apply **The Thunderstorm Rule** (see below).
5. Turn off Auto-Lock in your phone's Display Settings.
